 Portfolyo: [bugradaryal.github.io](https://bugradaryal.github.io)

## EXPERIENCE

### ● Pinsoft - IT Solutions and Consulting - (12/2024 - 01/2025)

-Full Stack Developer - Intern [\[github-API\]](#) / [\[github-UI\]](#)

Blog Platform • ASP.NET Core, React.js, MSSQL

- ◊ Developed an OOP-based REST API using .NET and N-Tier Architecture, implementing JWT authentication with refresh tokens; persisted refresh tokens in the database to provide secure session management.
- ◊ Implemented user management and role-based authorization using EF Core (Code First) and ASP.NET Identity; integrated email verification link delivery via SMTP using MailKit.
- ◊ Developed a responsive blog application with React.js, creating a user interface featuring a dashboard with Material UI and multilingual support using i18next; also gained hands-on experience with Java and PostgreSQL during the development process.
- ◊ Implemented user/content moderation via an admin panel, including account suspension, dynamic date-filtered charts, and API tests.

### ● Heweso Web Tasarım - (04/2025 - 05/2025)

-Backend Developer - Intern [\[github\]](#)

Airline Management System • ASP.NET Core, Docker, PostgreSQL, Redis, Elasticsearch

- ◊ Developed an OOP/N-Tier architecture-based airline management system using REST APIs and MediatR-based CQRS; implemented secure session management with JWT authentication and database-persisted refresh tokens, along with centralized exception handling. Built management modules for airport and airline operations — flights, ticket/seat reservations, crew and staff, fuel/weight tracking, and aircraft maintenance — along with user and role management via Identity.
- ◊ Containerized the API, PostgreSQL, Redis, and Elasticsearch (Kibana) services using Docker Compose, creating an isolated and reproducible development/testing environment that could be launched with a single command.
- ◊ Built centralized logging with Serilog, writing logs to PostgreSQL and Elasticsearch in parallel and enabling Kibana analysis.
- ◊ Optimized external API calls by periodically fetching the Central Bank of the Republic of Türkiye (CBRT) exchange rate XML via Hangfire and caching data in Redis; used the data for ticket pricing and centrally logged Redis operations.

## SKILLS

- **Programming Languages:** C#, Java, JavaScript
- **Backend:** .NET, ASP.NET/ASP.NET Core (API, MVC), Entity Framework Core, Spring Boot, Spring Web
- **Frontend:** React.js, Next.js, HTML, CSS, Bootstrap
- **Desktop & Mobile:** WPF, React Native
- **Databases:** MSSQL, MYSQL, PostgreSQL
- **DevOps & Tools:** Git, Docker, Elasticsearch, Redis
- **Libraries:** AutoMapper, FluentValidation, JWT, ASP.NET Identity, Hangfire, MailKit, MediatR, Serilog, SignalR, Hibernate

## PROJECTS

### ● AIChatCore - (ASP.NET Core, React.js, PostgreSQL, Docker, Elasticsearch) [\[github\]](#)

A containerized AI chat platform built with ASP.NET Core and React/Vite, integrated with OpenAI. Features a layered architecture using Scrutor for dependency injection, OOP, session-based chat/title management, centralized logging with Serilog-Elasticsearch-Kibana (ELK), API key middleware, rate limiting, multi-container orchestration with Docker Compose, and a CI pipeline using GitHub Actions.

### ● Gamebuddy API - (ASP.NET Core, Java Spring Boot, MSSQL) [\[github-NET\]](#) / [\[github-Java\]](#)

-Team Member, Backend Developer

A RESTful API platform developed using an OOP-based microservice architecture with ASP.NET Core and Java Spring Boot, featuring real-time chat with SignalR/WebSocket and dynamic player matching algorithms.

### ● XyzMail – Desktop Email Client - (C#, MySQL) [\[github\]](#)

A desktop email client built with MailKit and MimeKit, supporting Gmail accounts with OTP and device verification. Features include incoming/outgoing/trash folder synchronization using a layered architecture, HTML parsing with regex and substring-based script/style removal, DPI-based image resizing, and inline image extraction with file attachment support.

## EDUCATION

### ● Bilecik Şeyh Edebali University

Computer Engineering - GPA: 3.0/4.0

Graduated: 2025

## CERTIFICATIONS

- Azure Infrastructure - [Microsoft]
- Clean Code - [Udemy]
- Data Analysis with SQL - [Udemy]
- React & Context API from Scratch - [Udemy]
- Fundamentals of HTML and CSS - [İBB İSMEK]

## LANGUAGES

- **Turkish:** Native
- **English:** Advanced
